

Delta SubSea

24 Inch Suction Pile Vent

Delta Subsea's Suction Pile Top Equipment provides clients with reliable and simply operated tools and hardware used for venting, inserting, and extracting suction piles during mooring operations. Our vent have no moving parts. These are 24" (nominal diameter) vents can be ordered in almost any length, coated or non-coated, and with or without stainless seal surfaces. They are then welded directly to the pile top. Four incorporated J-Slots provide plug seating leverage for low effort engagement. The vent plugs are simple and robust. Their stainless steel handles can be pinned in the vertical position to assist horizontal insertion by technicians on land. Once the plugs are inserted in the vents subsea, the pile can be sucked down. To assist in that chore, our 3" (nominal pile diameter) hot stab and all-stainless receptacle is perfect for the high flow required for this operation.

Specifications

- ▲ Weight in air: 404.57lb 202kg @ 26 LONG
- ▲ Weight in water: 387lb 175kg @ 26" LONG
