

Delta SubSea

Cavitation Blaster

Delta SubSea offers a revolutionary new cleaning method for subsea applications. Traditionally high pressure water blasters are often ineffective because they aren't powerful enough or they're too powerful and often damage the object being cleaned. Using cavitation for cleaning has alleviated these issues and allowed Delta SubSea to make an extremely efficient and powerful cleaning machine for removal of marine growth from vessel hulls, strakes, risers, fairings and moorings.

Input/Output:

- ▲ Input 3000psi @ 30gpm
- ▲ Output 4000psi @ 20gpm

Weight

- ▲ In Air 350lbs
- ▲ In Water 230lbs

Dimensions

- ▲ 30"W x 36"L x 12"H

Materials

- ▲ 316 SS Aluminum
