

Delta SubSea

Medium ECB Pump

Delta SubSea has a revolutionary new cleaning method for subsea applications. High pressure water blasters are often ineffective because they aren't powerful enough or they're too powerful with the result being that they often damage the object being cleaned. Using cavitation for cleaning has helped alleviate these issues and allowed Delta SubSea to provide customers with an extremely efficient and powerful cleaning machine for the removal of marine growth from vessel hulls, strakes, risers, fairings and moorings.

Features

Input/Output:

- ▲ Input required 20-22gpm
- ▲ Output 3000psi @ 14gpm

Weight:

- ▲ In air 275lbs
- ▲ In water 225lbs

Dimensions:

- ▲ 30"W x 36"L x 12"H

Materials:

- ▲ 316 SS Aluminum
